

Dear Customer.

Thank you for purchasing PILOT Power AIRBRUSH. Every PILOT product guarantees years of customer satisfaction. PILOT Power equipments are unique and are designed for easy use with simple mechanism.

PILOT Power AIRBRUSHES are manufactured using components, which have a very good ratio of weight and strength. Its critically engineered air cap, nozzle and needle achieve a fine uniform spray.

It is widely used by artists for fine art work, photo retouching etc.

It is also used for eliminating unwanted details, decorating tags, painting paper cards etc. Its simplistic operation (by pressing the push button) makes it user-friendly for professionals as well as amateurs.

How to use

It is important to eliminate dust accumulated in the hose. You can easily do it by connecting the hose to the air receiver at a working pressure of (1.5 to 4 kgs / cm2).

Hold the airbrush in a similar manner as the pen. Pour the required quantity of prepared colour into the cup and slightly depress the push button, which will activate the air flow. Retraction of the push button will start the flow of colour. The movement of the hand (with the push button depressed & retracted) should be continuous till the flow of colour spreads in order to avoid surplus colour deposition at the end of each stroke.

For best results

We recommend the use of liquids of appropriate viscosity that's finely ground resulting in a free flow. Liquids containing loose particles should be used only after straining the mixture through a fine filter. This will avoid clogging of the nozzle.

Do not allow any liquid build-up on the air cap. Also take care of the needle point and prevent it from bending or damage. It is important that liquids are mixed in correct ratio of water or mixing medium to achieve proper viscosity.

Technical Specifications

Code no.	AB-10/10P	AB-12/12P	AB-15/15P
Cup capacity approx (ml)	5	10	15

Accessories

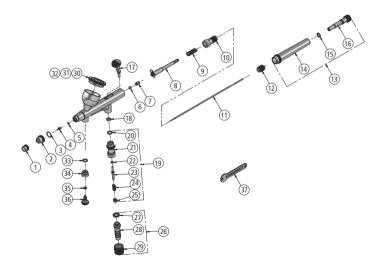

^{*} This Set Contains A Fluid Nozzle & Needle Valve.

^{**} Only For Pro Series

Disassembly of the Airbrush

In each of these steps please refer to the diagram. Remove each part by turning or pulling in the direction indicated by the arrows.

- Step 1. Pull air hose off the hose connector.
- Step 2. Remove back cover complete(12)
- Step 3. Loosen needle socket (11).
- Step 4. Pull needle valve (10) out. Be careful not to damage the tip.
- Step 5. Unscrew plunger cap (9).
- Step 6. Remove needle spring (8) and plunger with push button guide (7) respectively.
- Step 7. Remove push button (16) by pulling up.
- Step 8. Remove needle valve cover (1) and air cap (2) respectively.
- Step 9. Using the small flat spanner received with the airbrush, remove fluid nozzle(3). Note: the nozzle has two flat spots. Place the slot of the spanner over these slots and turn counter clockwise.

Cleaning & Lubrication

Submerge all parts of the airbrush except the needle in a solvent in a glass or metal pan for a few minutes. Then scrub the parts with a small soft paint brush until all liquid has been removed. Clean the cup thoroughly. Make sure there is a good liquid flow from where the nozzle connects. Use a q-tip to scrub the walls and to reach into the cup. Rinse the parts with hot water and dry thoroughly with a lint-free cloth. Clean the needle and check the point to make sure there is no damage. Look at the tip of the needle for a bend or hook. Using a white piece of paper and placing the needle on it and rolling it will make it easier to see if there is damage and needs to be replaced.

Assembly

- Step 1. Using the nozzle wrench, screw in, and then tighten the fluid nozzle (3). Caution: Do not apply excessive force when tightening the nozzle.
- Step 2. Screw the air cap (2) and hand tighten
- Step 3. Screw the needle valve cover (1) on the air cup (2)
- Step 4. Inspect the push button (16) notice there is a thinner line section on the flat part under the round head. This side goes towards the front. Now insert this part into opening vertically down as per shown in fig in the top horizontal slot.
- Step.5 Insert plunger with push button guide (7) as per shown in fig. and then slide needle spring (8) and plunger cap (9) respectively screw in and tighten. This spring mechanism will push the main lever and auxiliary lever forward.
- Step.6 Insert needle valve (10) through plunger with push button guide (7) and slowly push all the way forward. screw on the needle socket (11) and tighten securely.
- Step.7 Cover the back of air brush with back cover complete (12)

Periodic Airbrush Maintenance

On the inside page you will find the diagrammatic representation of the airbrush with instructions for airbrush maintenance. Please study the diagram for parts recognition and to understand how to disassemble and assemble the airbrush.

For Long Lasting Use

- Do not allow remaining liquid to dry up in the cup.
- Wash the cup & the nozzle immediately with cleaning solvent after use by spraying.
- Never use a sharp object for cleaning, instead use a soft brush.
- Always handle the nozzle and the needle with utmost care, for if tampered with or damaged will not produce the desired results.
